

FREELANCE BUSINESS MANAGER

Complete Google Sheets System for Freelancers
NasriTools | nasritools.etsy.com

■ Quick Start (3 Steps)

Step 1	Download & Open Download the .xlsx file → open in Google Sheets (File > Import) or Excel.
Step 2	Enter Your Data Go to each tab and fill in the YELLOW cells with your information.
Step 3	Watch It Work Dashboard updates automatically — income, expenses, taxes, clients all tracked.

■ What's Inside (7 Tabs)

■ Dashboard	Real-time overview: monthly revenue, expenses, profit, tax estimate, and top clients.
■ Clients	Client database with auto-counted projects and total revenue per client.
■ Projects	Track every project: status (Active/Completed/On Hold), category, budget, deadline, notes.
■ Invoices	Invoice tracker with auto overdue detection, payment status, and total paid/unpaid sums.
■ Income & Expenses	Log all income and expenses by category; 25% tax estimate calculated automatically.
■■ Time Tracker	Log tasks with start/end time; hours and earnings calculated automatically by formula.
■ Reports	Auto P&L; summary, project breakdown, invoice summary, and time/earnings by client.

■■ How Formulas Work

- **Dashboard Revenue:** Automatically sums all income from Income & Expenses tab
- **Invoice Overdue:** =IF(DueDate < TODAY(),"OVERDUE","Pending") — turns red automatically
- **Time Hours:** =(End Time - Start Time) × 24 → decimal hours
- **Tax Estimate:** = Net Profit × 25% (adjustable in cell C52 of Income tab)

- **Client Revenue:** SUMIF formula totals revenue per client from Projects tab
- **Project Count:** COUNTIF formula counts projects per client automatically

■ Color Guide

- **Yellow cells** = Enter your data here
- **Blue cells** = Formulas (do not edit)
- **Green rows** = Completed / Paid
- **Red rows** = Overdue / Unpaid

■ Pro Tips

- Add your business currency symbol in the Format > Number > Currency menu.
- Use the Time Tracker tab daily — it automatically calculates your hourly earnings.
- The Dashboard refreshes every time you open the file — no manual refresh needed.
- You can add rows to any tab; formulas are designed to work with SUMIF/COUNTIF across full columns.
- Duplicate the file each month for monthly archives, then start fresh.
- Change the tax rate in Income tab cell C52 to match your country's rate.
